

Tin Nilar (Tiffany) Hlaing

<https://www.linkedin.com/in/tinnilarhlaing/> | tinnilarh@gmail.com | Greater New York

Summary

Senior Software Engineer with 9+ years of experience architecting and scaling distributed systems, data platforms, and generative AI services across video streaming, advertising, and fintech. Experienced in building end-to-end ML systems spanning data pipelines, model training, evaluation, and production inference infrastructure. Proven track record driving \$MM+ business impact, improving reliability and latency at global scale, and mentoring engineers. Skilled in AWS cloud architecture, microservices, distributed data processing, and AI/ML infrastructure, leveraging AI-native development practices to accelerate engineering execution and build higher-quality software systems.

Technologies and Languages

- **Languages:** Java, Python, C, JavaScript, TypeScript
- **Technologies:** AWS, React/Redux, Spring/Guice/Dagger Frameworks, Docker, SQL, NoSQL, Spark, Kubernetes

Professional Experience

Amazon

New York, NY

June 2020 - Present

Prime Video

- Drive team's annual technical roadmaps by evaluating system gaps and business opportunities, leading to the delivery of two scalable Catalog data validation and merge APIs that reduce operational costs by 30% and accelerate time-to-market for future feature launches.
- Mentor 5+ junior engineers and apprentices; improve onboarding, resulting in 25% faster ramp-up and enabling two promotions within 18 months.
- Champion org wide best practices and operational excellence by root-causing and preventing urgent high severity tickets with the org wide Correction of Error process and documentation.
- Deliver end-to-end generative AI infrastructure spanning LoRA training, evaluation, and production inference APIs for 5+ custom multimodal models on AWS SageMaker, enabling Prime Video AI Studio to rapidly generate and iterate on creative assets at scale.
- Engineer a Kubernetes-based GPU resource orchestration framework with priority scheduling and workload preemption, enabling distributed training and inference workloads to efficiently share constrained GPU capacity while maximizing cluster utilization.
- Eliminate \$500K+ in duplicate purchases annually by architecting an automated duplicate title matching/merging system for video titles and directly improving customer trust and retention.

Brand Advertising

- Co-developed ML-powered bidding/forecasting service that increased first-time shopper orders by 5%, driving tens of millions in revenue.
- Designed advertiser reporting APIs used by 100K+ advertisers globally, cutting partner integration time by 30%.
- Led bidding control experiments identifying new revenue opportunities and influencing product roadmap.

Capital One

New York, NY

July 2017 – May 2020

Retail Bank Account Opening

- Optimized the existing AWS Lambda micro-services architecture with Step Functions, improving the reliability for millions of daily transactions for Free Trial and Double Swipe product features.
- Built Spring Boot + Kafka services for recurring transactions notifications, reducing churn by proactively alerting 100K+ customers monthly.
- Migrated 360 bank account statements data to AWS cloud, ensuring 100% compliance and enabling large-scale cloud adoption.

Education and Certifications

- | | |
|---|--------------------|
| • B.A. Computer Science , Barnard College, Columbia University | 2013 - 2017 |
| • AWS Certified Solutions Architect | 2020 |
| • Introduction to Machine Learning , Coursera | 2022 |
